

# ORIGAMI CRANE INSTRUCTIONS

## STEP 1 > Make 4 creases to create the SQUARE BASE

- Fold the paper in half and create a nice crease – printed side facing out
- Fold the paper in half again and create a second crease – printed side facing out
- Fold the paper diagonally to create a crease – plain side of the paper facing out
- Fold the paper diagonally again to create a second crease – plain side of the paper facing out
- Create the SQUARE BASE by folding the paper diagonally printed side out and tucking in two corners

## STEP 2 > Create a KITE

- Identify the center of the paper – fold the two corners on either side toward the middle of the paper
- Turn the square base over and fold the two corners on either side toward the middle of the paper
- Fold the triangle at the top of the kite toward one side and then the opposite side to create creases

### STEP 3 > Mastering the petal fold to create the wings (ORIGAMI BIRD BASE)

- Unfold so you are back to the SQUARE BASE from STEP 1 only now you have creases from STEP 2
- With your finger supporting the fold at the crease gently lift the paper from the bottom up
- Create a diamond shape by folding in two sides to make the bottom half of the diamond & gently crease to create the top half of the diamond – if possible, watch a demo of the petal fold
- Repeat the petal fold on the other side so you have another diamond by repeating a, b & c

### STEP 4 > Creating the neck and tail of the crane

- Identify the wings of the crane, and notice one part of the diamond from STEP 3 has a slit
- Fold the edges in - not all the way to the slit and repeat on other side
- Create a crease by folding the neck and tail so they are at an angle sticking out a bit
- Watch a video or have someone walk you through how to get the neck and tail to be between the wings
